

VISITOR MANAGEMENT SYSTEM

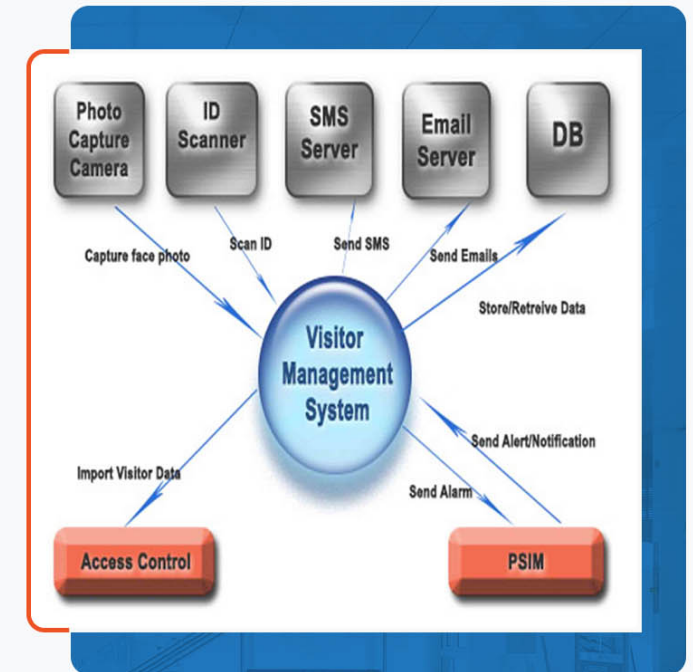

Introduction

KARA Visitor Management System is an initiative solution contribute to the efficiency and safety of the organizations by focusing intently on visitor flows and performing in-depth analytics based on the data. Lend a more professional appearance, enhance security and meet compliance mandates for the collection and auditing of visitor data. Various visitor information reports will be generated based on Visitor, Date, Department, Staff, etc. which will cover all the required visitor data analysis.

Usage

Kara Visitor Management System allow organizations to automate the entire process of registering/pre-registering visitor, printing a badge and capturing detailed information in seconds by simply scanning an ID (such as business card or passport) and capturing visitor face photo.

Kara Visitor Management systems contribute to the efficiency and safety of the facility by focusing intently on visitor flows and performing in-depth analytics based on the data. There have been well-recorded instances of Kara Visitor Management System that saved organizations catching fraud in potential dishonest billing (owing to excellent time registrations and tracking), making visitor registration in foreign localities easier, and easy location guidance for visitors (printing on badges).

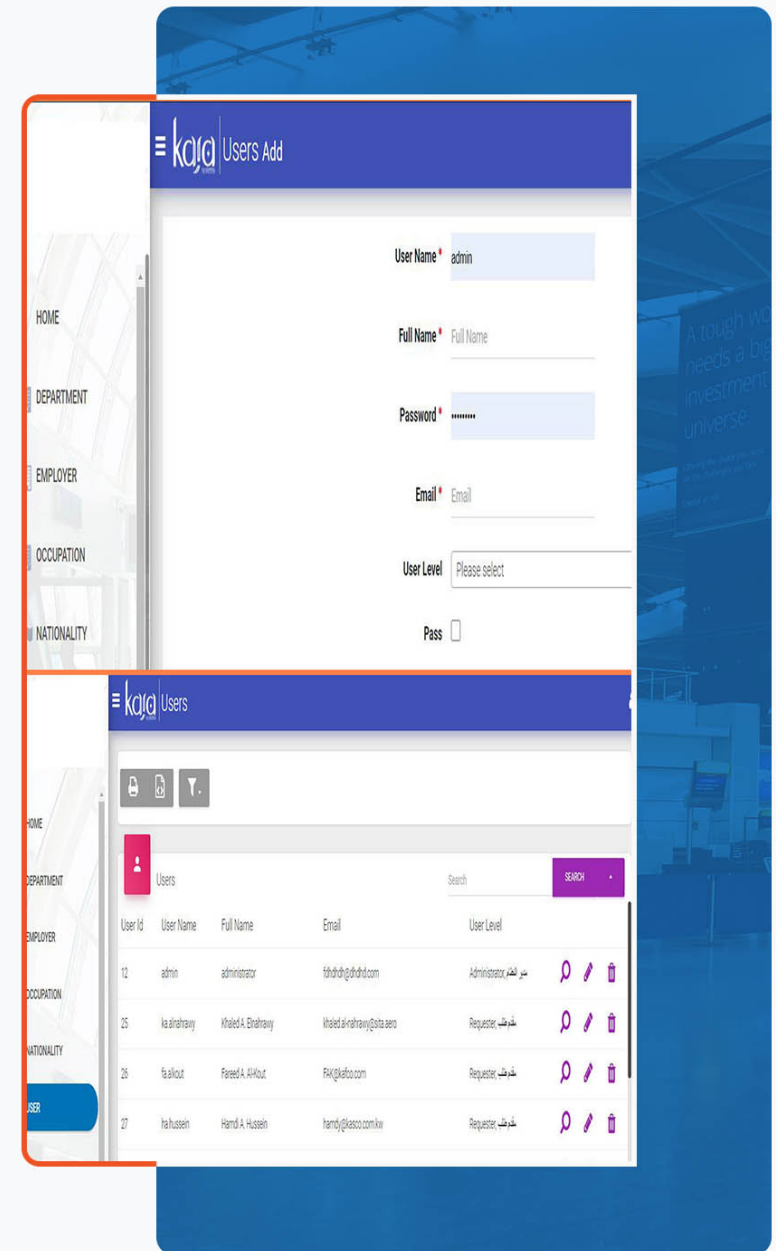

Kara Visitor Management System integrates with access control software ,PSIM ,scanner and face capture camera which allows visitor movements to be tracked and entry to sensitive areas restricted at all times. This integration becomes necessary when visitors & contractors are allowed free access to a facility and are not always escorted by a host. In addition visitors can receive alerts in case of emergency by mail or SMS by using Email server and SMS gateway services.

Kara Visitor Management System centralizes communications and interactions with third party systems, printers, access controls and other devices using messaging in standard formats or using database. Leverage features such as registration, request tracking, file management, advanced reports and customizable databases that locate bottlenecks help make continuous improvements to your buiseness processes.

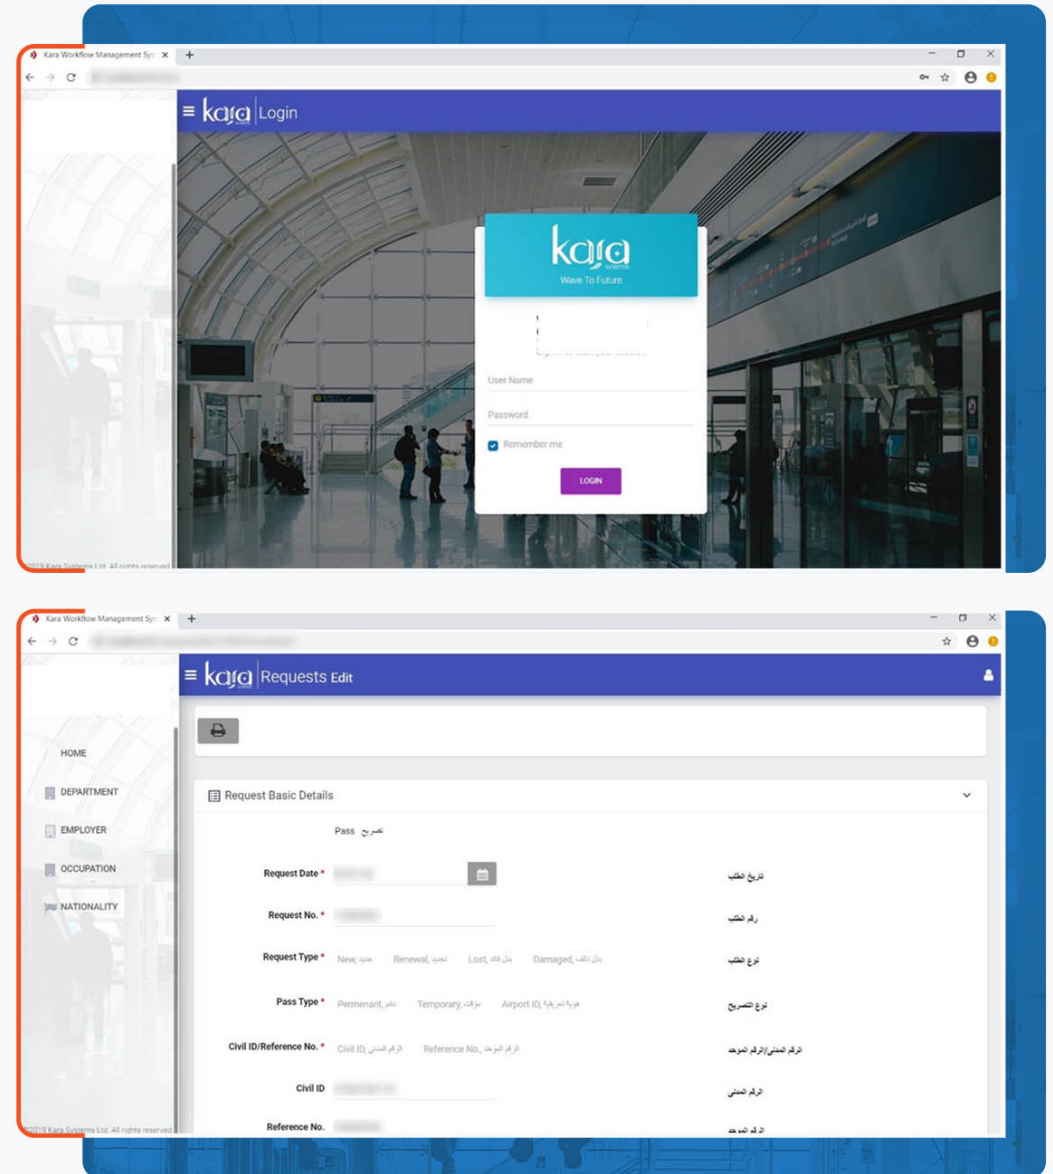

Solution

- Visitor Registration - One of the basic features of a visitor entry tool, the system record vital personal information about the visitor before they enter the site. Based on user registration predefined settings (Name, address, telephone number, email ID, etc.) Data can be subsequently used for re-registration purposes as well.
- Visitor Pre-Registration - Using Kara Visitor Management System Self-Service Web Portal, hosts/requestors can pre-register visitors and system will route the visit request to the appropriate approvers (where applicable) then generate a token/OTP to be used at visitor check in. Kara Visitor Management System will maintain the identity data for any future visits.
- Host Notifications – Allowing a host to be informed of a visitor's arrival is vital. This streamlines any preparations for meetings scheduled, while the visitor loses minimal time.
- Photo capture, ID/Passport scanner and processing – Recording a visitor's photo and scanned ID/Passport for immediate use is critical in some entities. This facilitates immediate ID verification, for security purposes.
- Segmented Check-ins – There exists a distinction in a variety of visitors who visit firms. Some may be job seekers, other salesmen and professionals looking to tie-up a deal and others on more personal visits. Segregating these visitors in-system allows greater data analysis.

Features

- Secure Web portal is an all-in-one solution that enables secure use of Web 2.0 with real time multi-layered protection against web-borne malware, largest application coverage and granular application control, centralized intuitive management. It is built with the most powerful combination of Web security.
- Streamlined processes and reduction of manual entry.
- SQL Server Database Information storage – Storing on SQL Server provides enhanced security and ensures that it can be accessed without degradation loss, while also increasing the security of sensitive visitor information.
- Badge Printing and tokens have become the mainstay of visitor management system. it can be integrated with access control API that will program the pass. They consist of all vital information for authentication by security.

- Easy registration process, KARA Visitor Management System take less than 1 mins for visitors who have preregistered themselves and take less than 3 mins for on go visitors.

- Access Restrictions based on the seamless integration with ACS, KARA visitor management system will restrict visitors to enter un-allowed zones.

- Data analysis and reporting dashboard provide Analytical data, Visitor statistics, Operators KPI's, trends and actionable insights. These can be turned into visible process improvements. Various visitor information reports will be generated based on and not limited to:

Duration Date/Time.

Visitor name/code/ID number.

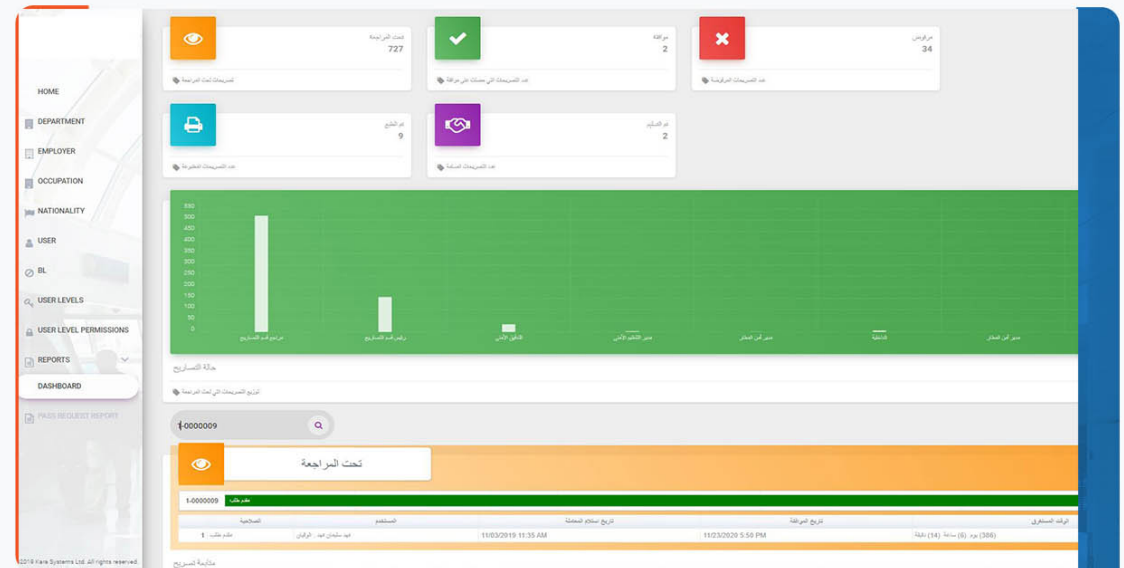

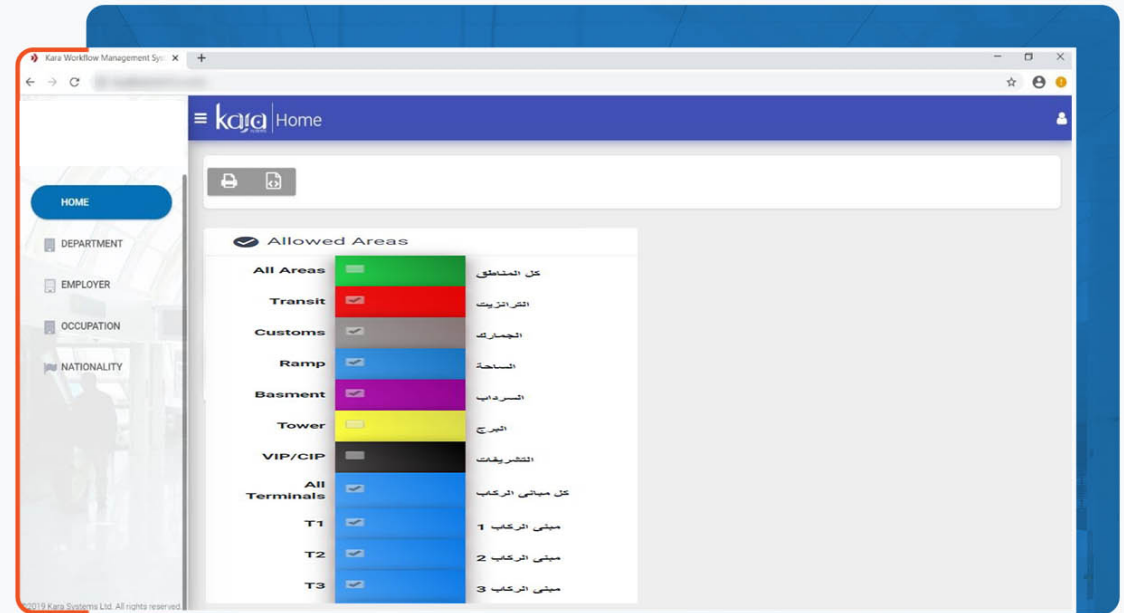

Establishment/department.

User (Admin/Operator, etc.)

Host Name/ID/code.

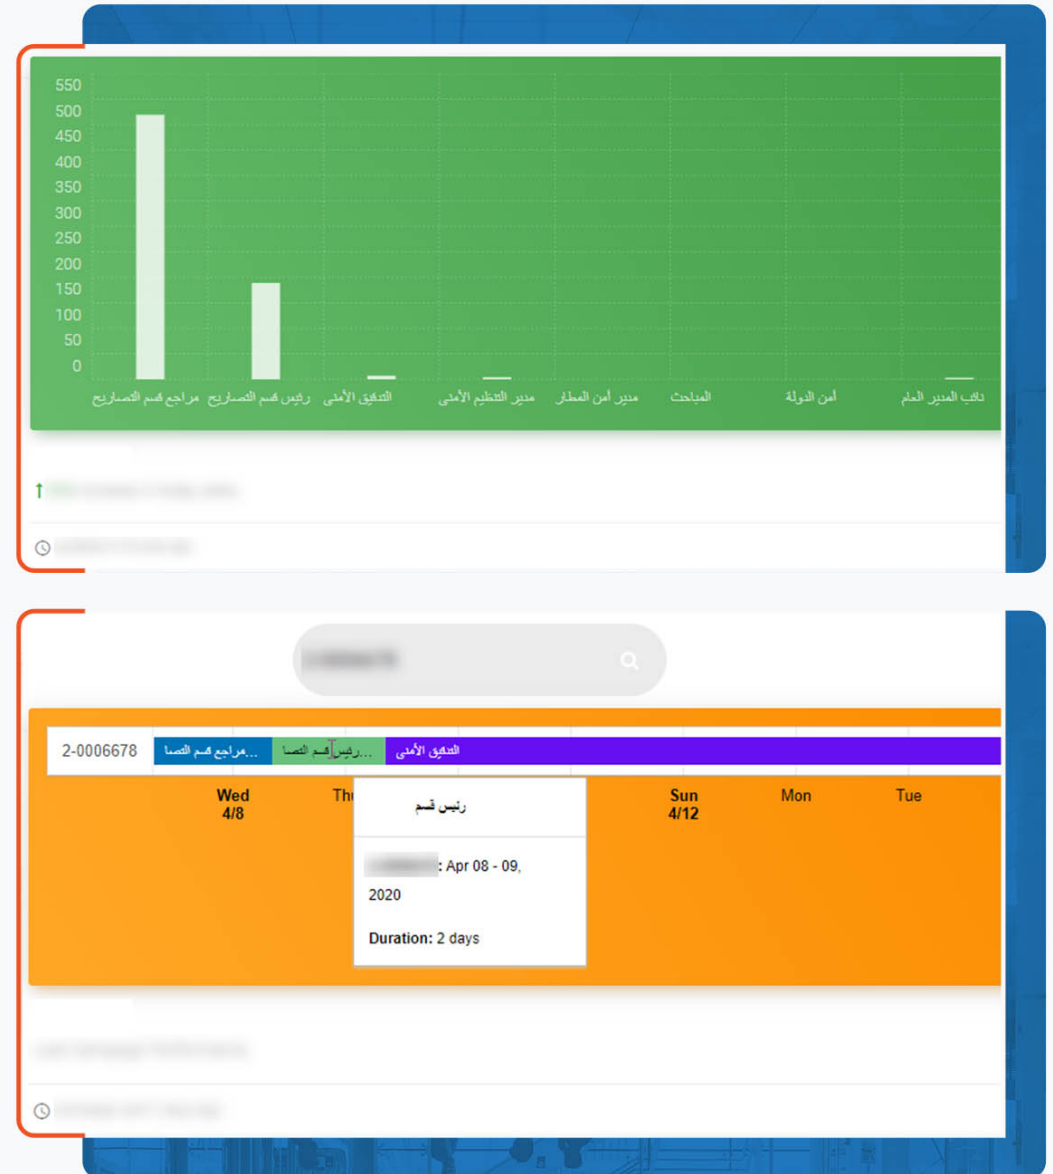

More reports can be customized based on the user requirement.

Automatic report sender.

Additional Features

- Benchmarks for each stage that can help guide your team's efforts, helping manage time more effectively. By identifying the most expensive drains, you can address them and improve processes.
- Emergency Alerts - Alert all your personals with instant notifications in case of any emergency. Or add a list of people you want to alert in case of an emergency. Our system will send them SMS alerts if any emergency alert is made.
- Parking Allocation - Kara Visitor Management System allows visitors/hosts to request parking spaces for Visitors, ensuring Visitors have a smooth arrival experience for their visit.
- Visitor Banned list- user can manually add any visitor on the banned list which will not allow him to register on site or pre-register. Automatic process can be done by using KARA Work Flow management system module.
- Multilingual system – Visitors often arrive at complexes, but not everyone has English as their first and strongest language. In such cases, it's paramount that all visitor management tools will give the option to choose between Arabic or English interfaces.

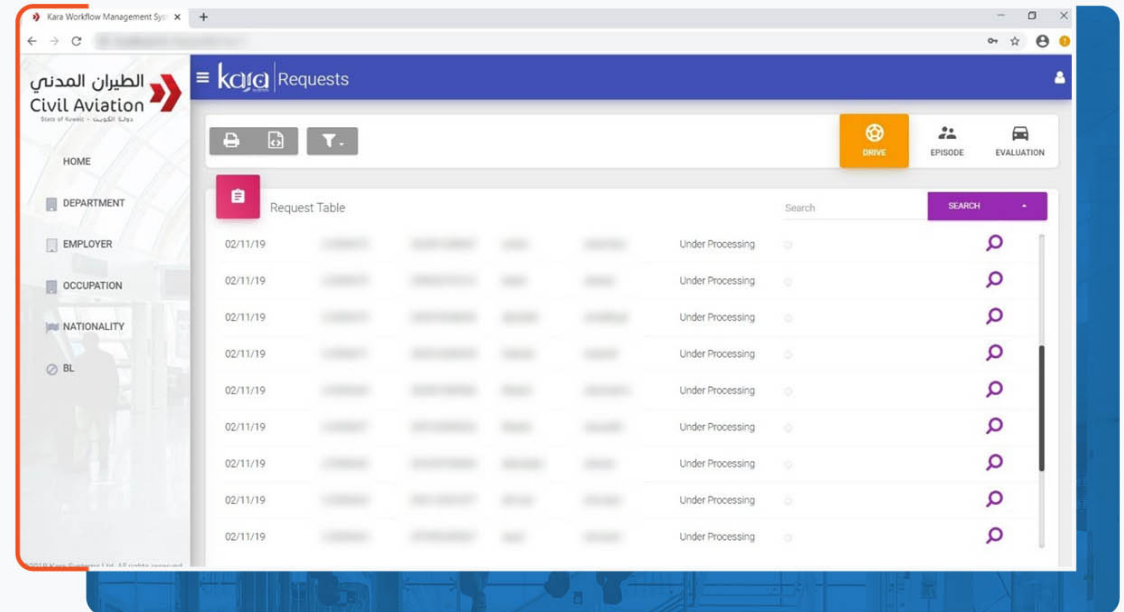

Easy integration

- PSIM integration – Based on the PSIM Integration, KARA Visitor management system trigger an alert to mobile and email id in different scenarios based on user configuration.

The Alarm raised at PSIM application in case of any banned visitor check-in the facility or any different scenarios based on user configuration.

- Access Control integration – Kara Visitor management system has a seamless integration with ACS through API/SDK and Database to import all the required data from Kara VMS to ACS and vice versa.

Qualifications

We have successfully delivered our services to businesses worldwide facing the ever-changing technological challenges of our clients and providing them with scalable solutions.

Our specialists are equipped to create a dynamic intelligent system to facilitate your work, develop truly functional software to control your business processes, adding functionality and effectiveness to your system. Our proven strategy and attention to details applied to our technical expertise ensures our customers robust and cost-effective solutions.

Our solution is built on top of a solid software development engine which produce many benefits as it's a fully customized software. Customizable solutions are great for your business because they fill your needs perfectly. You don't have to overpay for modules that you can't remove or replace. In the final application or platform version, only the necessary functions will remain.
